

ASSA ABLOY Hospitality Brings Cloud-Based Security to the Hotel Market with New Vostio Access Management System

Provider of security solutions for hospitality industry debuts first cloud-based access management system developed specifically for hotels

Stockholm – June 13, 2018 – ASSA ABLOY Hospitality, provider of advanced security technologies for the hospitality industry, announces the launch of its cloud-based access management system, **Vostio**. The first cloud-based system of its kind designed for the hotel space, Vostio is a maintenance-free and universally accessible system that requires no local servers, providing staff with a user-friendly solution that allows them to efficiently manage all areas of a property from any location.

Designed to maximize operational efficiency and enhance the guest experience, Vostio works to ensure that all properties across a hotel chain are equipped with the same high standard functionality and that all corporate guidelines are uniformly followed. With a focus on enhanced security and data privacy, Vostio is GDPR ready and built on the latest industry standards, ensuring total data confidentiality, integrity and traceability through the use of its encrypted system. As a cloud-based platform, Vostio also receives automatic software updates to ensure that properties are always fully protected against the latest threats and vulnerabilities.

"We're in a new era of security technology, with hotels and businesses in general moving away from traditional hardware to incorporate cloud-based solutions to streamline operations and increase property and data security," says Christophe Sut, Executive Vice President and Head of the Global Technologies business unit for ASSA ABLOY Hospitality. "With this in mind, we knew that, to continue the evolution of security technology, that we needed to develop a new groundbreaking solution that still offered the traditional services we are known for, while creating an entirely new experience that ensures security and peace of mind for everyone."

Since Vostio is accessed through the cloud, hoteliers can now leverage the ability to securely oversee and manage their access management operations from anywhere in the world, with features that include:

- Control staff and guest access
- Instant activation or deactivation of mobile keys
- Coding of RFID keycards when used in conjunction with an encoder
- Revocation of room access to ensure onsite security

- Monitoring of system health
- Reviewing events such as access attempts and keycard creation

With no need for on-site servers, hoteliers using Vostio can also avoid both costly hardware expenses and time-consuming maintenance issues. Further reducing costs, Vostio's also offers standardized monthly license subscriptions. Developed as a future-proof system, Vostio is equipped to seamlessly integrate with new property upgrades and is also compatible with existing door hardware. Vostio's scalable platform allows it to meet the needs of any property, regardless of type or size, and can integrate with other cloud-based solutions to additionally improve efficiency and reduce costs.

Hoteliers will get a first look at Vostio and its capabilities at HITEC Houston, taking place June 18-21 at the George R. Brown Convention Center in Houston, Texas. To schedule a demo during HITEC at ASSA ABLOY Hospitality's **booth #901**, please [click here](#) to fill out an online request form.

About ASSA ABLOY Hospitality

The global leader in hotel security technology for nearly 40 years, ASSA ABLOY Hospitality is a part of the ASSA ABLOY Group, a publicly listed company with 47,000 employees. With products installed in properties all over the world, securing millions of guestrooms globally, the company's comprehensive range of security and technology solutions is comprised of VingCard electronic locks, Elsafe in-room safes, integrated software platforms and advanced mobile access solutions. Its latest innovation, ASSA ABLOY Hospitality Mobile Access provides advanced security for hotels and augments the stay experience for today's tech-savvy guests. Operating with secure [Seos](#) technology, Mobile Access allocates guestrooms and generates encrypted digital keys over a secure channel. This allows users to bypass the front desk and access their assigned guestrooms via their personal smart phones and watches. In order to provide best-in-class customer service, ASSA ABLOY Hospitality offers support in more than 166 countries worldwide. For more information, please visit www.assaabloyhospitality.com.
